

# 2025 Calendar

Wood-water relationships

SWST – International Society  
of Wood Science and Technology

## **Foreword**

Wood-water relationships are a complex and fascinating area of wood science, spanning from scientific principles, such as the dynamics of water movement inside wood, to cultural aspects, for example related to the charm of wooden boats. The pictures in this calendar explore twelve facets of this wide-ranging theme, from the use of timber near water, to scientific testing, to the effects of weathering, to aesthetics. The aim is not to provide an exhaustive coverage, which would of course be not possible, but to offer some particular insights into these relationships.

## **Authors**

Silvana Calvano<sup>1</sup>, Francesco Negro<sup>1</sup>, Régis Pommier<sup>2</sup>

<sup>1</sup>DISAFA, University of Torino, Italy; <sup>2</sup>I2M, University of Bordeaux, France

This calendar was realized as part of the activities promoted by the SWST Outreach and Engagement committee

All the authors of the pictures are acknowledged in the calendar and thanked for their kind collaboration; cover page by Silvana Calvano

This calendar is not for commercial use. It is freely available online at [www.swst.org](http://www.swst.org) and intended for educational purposes only

## **How to print**

The size is horizontal A4: printing on medium/high density paper and spiral binding will easily get the hang on the wall version. Printing will leave blank margins on the paper, which can then be trimmed if desired. The resolution of the pictures is intended for printing on A4 size maximum. For best results, refer to a copy shop.
